

# THIRD SPACE LEARNING

Specialist 1-to-1 maths interventions  
and curriculum resources

**Rapid Reasoning**

**Year 6 | Week 4**

This week, the new Year 6 objectives that are introduced focus on **calculations with all four operations** for the first time.

Year 6 objectives introduced in a reasoning context for the first time this week focus on multiplying numbers with up to four digits by a two-digit whole number.

There are no new addition or subtraction objectives in Year 6, however this week children are also exposed to addition and subtraction questions from the Year 5 curriculum, which involve adding and subtracting numbers with more than four digits.

Children are also exposed to solving multi-step problems, involving a range of calculation skills.

Note that, unlike questions from the arithmetic paper, in reasoning questions the formal method for multiplication/division is **not** required for the award of method marks.

**Q1** Tick all the acute angles.

**Q2** Fill in the missing boxes in this calculation.

$$\begin{array}{r}
 \begin{array}{|c|c|c|c|} \hline 5 & 6 & 8 & \square \\ \hline \end{array} \\
 + \quad \begin{array}{|c|c|c|c|} \hline \square & \square & 3 & 4 \\ \hline \end{array} \\
 \hline
 \begin{array}{|c|c|c|c|} \hline \square & 3 & \square & 2 \\ \hline \end{array}
 \end{array}$$

What are examiners looking for?**Q3**

A toy shop orders 14 boxes of small bouncy balls.

Each box contains 24 bags of bouncy balls.

Each bag contains 5 small bouncy balls.

How many small bouncy balls does the toy shop order?

**1,680** bouncy balls

2 marks

Why are we asking this question?

This question is designed to assess children's ability to identify and solve multi-step problems, alongside their ability to multiply two-digit numbers by two-digit numbers.

What common errors do we expect to see?

**Children give the answers 120 or 336.** This indicates that children have misinterpreted the information given in the problem and only carried out a single step from the problem: they have multiplied  $24 \times 5$  or  $24 \times 14$ .

**Children make an error with the 'long' multiplication required in the question.** This indicates that children are not secure with the long multiplication strategies taught in the school, and that these need to be retaught, ensuring they are taught in a way that fosters a true conceptual understanding.

### How to encourage children to solve this question

First, encourage children to read through the question, underlining or highlighting the key terms. They should have identified '14 boxes', '24 bags' and 'each bag contains 5 bouncy balls' as the key information from this problem.

Children should then be able to formulate this information into the calculations needed, recording  $14 \times 24 \times 5$  or similar.

They should then be encouraged to consider the most efficient way to carry out these calculations, identifying that the calculations may be simpler to carry out if they multiplied 24 by 5 or 14 by 5 first. However, children should also understand that due to the distributive law of multiplication the order that they carry out the calculations in does not impact the final outcome.

Children should then be encouraged to carry out the two multiplication calculations needed to solve this problem.

- Q1** Tallulah has drawn a rectangle.  
The length of the rectangle is double its height.  
The height of the rectangle is 6cm.

What is the area of the Tallulah's rectangle?  
Don't forget your units!

1 mark

- Q2** Here are two numbers:

9,996

10,006

Circle the number closest to ten thousand,  
then explain how you know.

1 mark

**Q3** This line graph shows how far Evie cycled in one afternoon.

a

By what time had Evie cycled 8km?

1 mark

b

How far did Evie cycle between her first and second breaks?

	Requirement	Mark	Additional guidance
Q1	Award <b>TWO</b> marks for the correct answer of 72cm <sup>2</sup> . Award <b>ONE</b> mark for either: an answer of 72 or 72cm <b>OR</b> a complete method, with no more than one arithmetic error and the correct units, for example: $6 \times 2 = 12$ . $12 \times 6 =$ wrong answer.	1	Correct units must be given for the award of <b>TWO</b> marks.
Q2	Award <b>ONE</b> mark for <b>BOTH</b> the correct identification of 9,996 <b>AND</b> an explanation that acknowledges that the difference between 9,996 and 10,000 is 4 whereas the difference between 10,006 and 10,000 is 6.	1	Explanation must be complete. Do <b>NOT</b> accept vague explanations, for example, Do <b>NOT</b> accept '9,996 is only 4 away from 10,000.' Accept reference to either 10,000, 10 thousand or ten thousand.
